Bandung, Indonesia

ABOUT THE WORK

I build practical software where AI, automation, and clean interfaces meet. My projects span AI chatbots for restaurants, casual game platforms, 3D portfolio experiences, and game backend tooling. The selection on the following pages is drawn directly from my public GitHub and live deployments — each piece is shipped, working, and built end-to-end.

FOCUS AREAS

> **AI Integration**	Chatbots, OpenAI APIs, automation flows.
> **Web Engineering**	React, Next.js, TanStack, Tailwind, Three.js.
> **Backend Services**	Node.js, Express, REST, Supabase / PostgreSQL.
> **Product Shipping**	End-to-end builds deployed on Vercel.

DynamenuAI

AI • HOSPITALITY • AUTOMATION

AI-powered dining and food request application combining a chatbot interface with kitchen-side automation. Customers place orders by chatting; the system parses intent, confirms items, and routes the order downstream — replacing slow manual ordering with a conversational flow.

Stack: React, Node.js, OpenAI API, Tailwind

Repo: github.com/adityaagustiawan/DynamenuAI

NexPlay-playhub

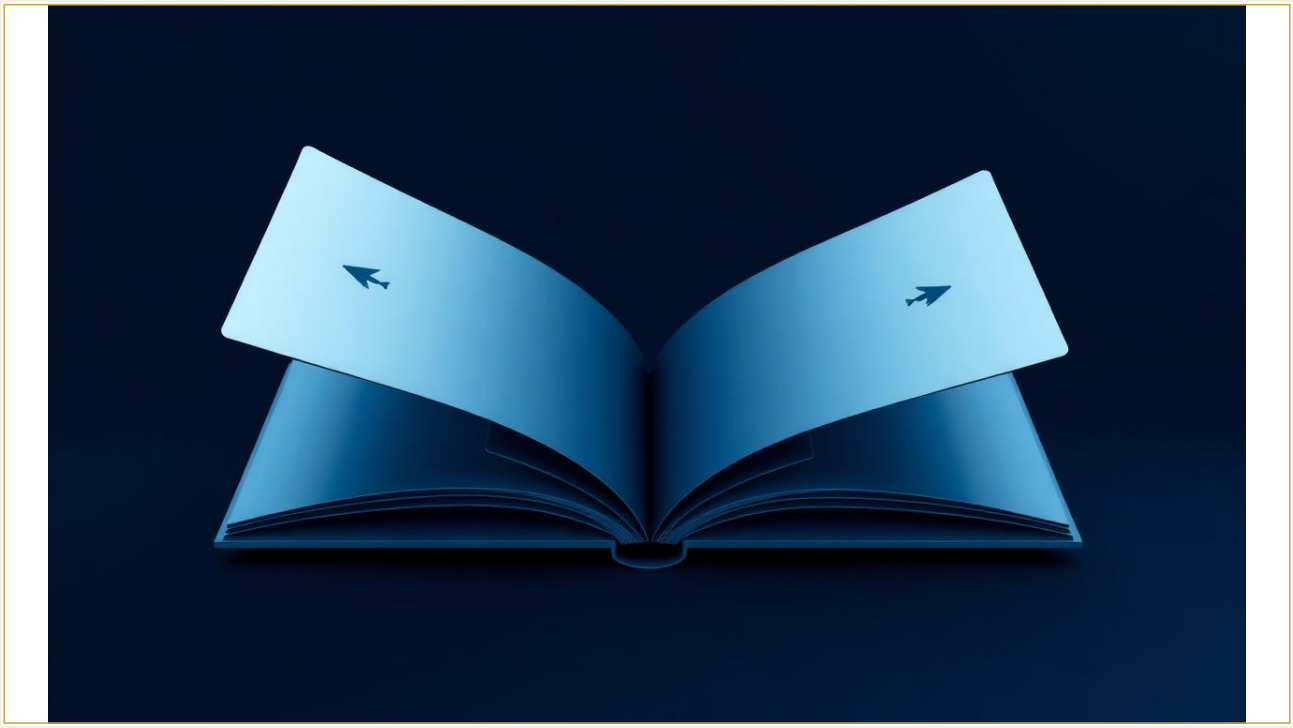
GAMING • WEB PLATFORM

A web-based play hub that brings casual games into a single accessible platform. Designed to make it easy for visitors to discover and launch games directly from the browser, with a focus on performance and a clean play-first interface.

Stack: Next.js, React, Tailwind, Vercel

Repo: github.com/adityaagustiawan/NexPlay-playhub

Portofolio-CV



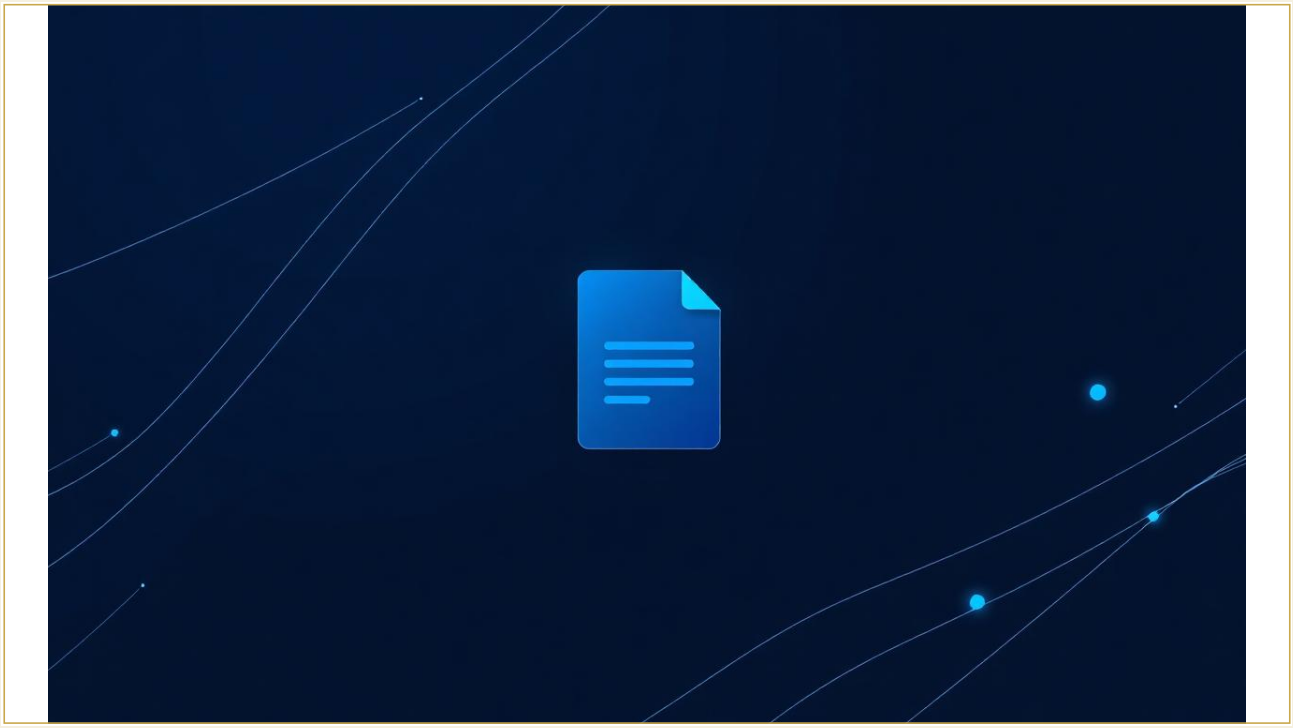
PORTFOLIO • 3D • INTERACTIVE UI

Personal portfolio website built around a 3D flip-book interaction and Swiper-based navigation. Showcases work history and projects through a tactile, page-turning experience rather than a traditional scroll layout.

Stack: Three.js, Swiper, React, Vercel

Repo: github.com/adityaagustiawan/Portofolio-CV

CV-Portofolio



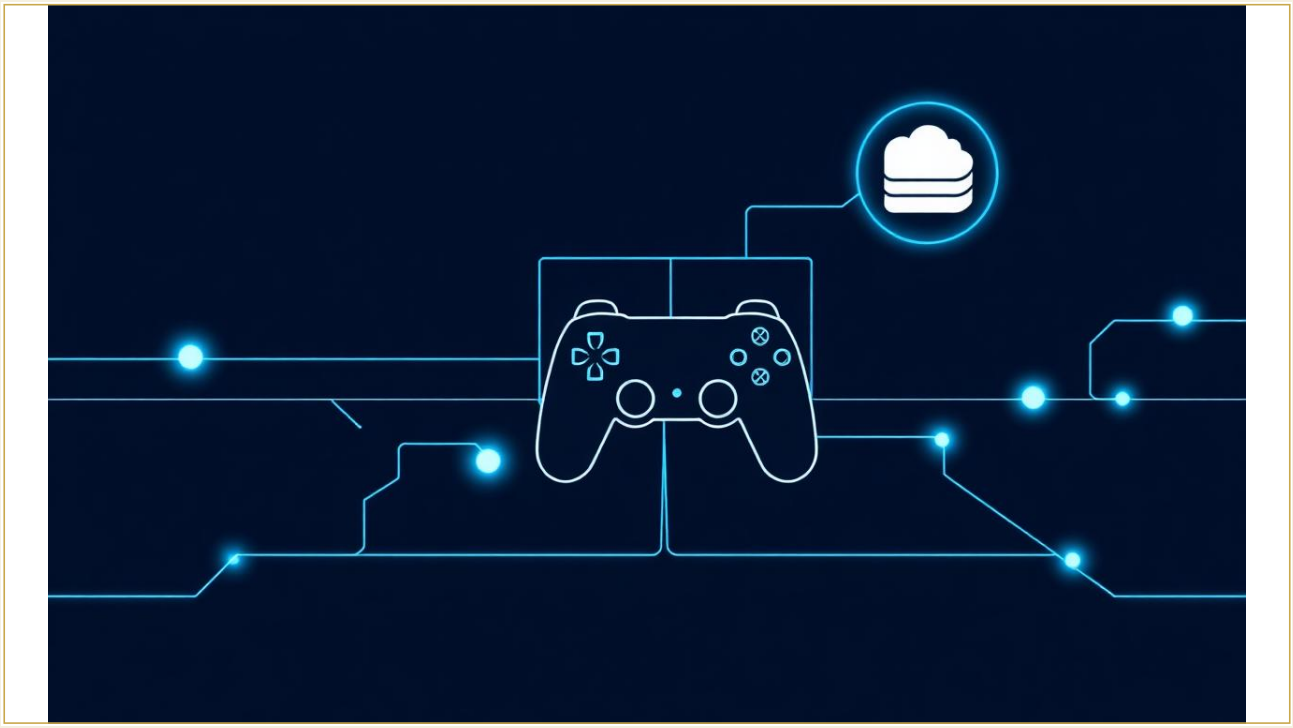
RESUME • WEB APP

Structured CV web application presenting personal information, skills, and experience in a clean, recruiter-friendly layout. Built as a fast, deployable single-page resume that doubles as an online business card.

Stack: React, Tailwind CSS, Vercel

Repo: github.com/adityaagustiawan/CV-Portofolio

growtopia-backend



BACKEND • GAME SERVERS

Custom backend services and tooling exploring Growtopia-style game server architecture. Focuses on connection handling, packet flow, and modular service design as a learning ground for low-level network programming.

Stack: Node.js, TCP / Networking, JavaScript

Repo: github.com/adityaagustiawan/growtopia-backend

LET'S BUILD SOMETHING.
